

SIDDHARTH S

DEVOPS & CLOUD INFRASTRUCTURE ENGINEER

Chennai, India | siddharthtp10@gmail.com | linkedin.com/in/siddharthtps | Open to Relocation

PROFESSIONAL SUMMARY

DevOps and Cloud Infrastructure Engineer with 5 years automating and scaling cloud-native systems on AWS. Progressed from CI/CD and cloud infrastructure into a platform-automation role — automating RBAC, deployments, EKS node scaling, and SSO access management. Led the migration of 15 microservices to Amazon EKS (120+ pods), cut infrastructure costs ~40%, and modernized pipelines to 15–20 releases/week with Helm-, Kustomize-, and Flux-driven GitOps. Builds AI-assisted DevOps automation — MCP servers, custom AI agents, and a hackathon runner-up PR-validation bot used by ~150 developers. Certified Kubernetes Administrator (CKA) and AWS Certified Solutions Architect – Associate.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EKS, EC2, S3, EFS, VPC, IAM, KMS, Secrets Manager, CloudWatch, Route 53), CloudFormation, Terraform (personal projects), Infrastructure as Code (IaC)
Containers & Orchestration: Kubernetes, Docker, Helm, Kustomize, Flux, GitOps, RBAC, HPA/VPA, Amazon ECR
CI/CD & Automation: Jenkins, GitHub Actions, Bitbucket, Gradle, Maven, Blue-Green & Canary Deployments, GitOps, FinOps / Cost Optimization
AI & Intelligent Automation: MCP Servers, GitHub Copilot (agent mode), Claude AI, Custom AI Agents & Skills, AI/ML Document Processing
Observability & Reliability: New Relic, Elastic Observability, Amazon CloudWatch, SRE Practices, High Availability, Incident & On-Call Management
Languages & Tooling: Python, Bash, YAML, Git, GitHub, Linux, DevSecOps, IAM Least-Privilege

PROFESSIONAL EXPERIENCE

DevOps Engineer, Platform Automation — Incedo Inc., Chennai

Sep 2025 – Present

- Automated platform operations across Amazon EKS — RBAC management, deployment rollouts, and node scaling — cutting manual toil and configuration drift across all environments (dev, QA, TRN, production).
- Built a GitHub Actions workflow to manage SSO roles and user access, replacing manual, ticket-based grants with auditable, self-service role provisioning triggered on demand.
- Created and maintained RBAC roles and read-only EKS access for Jenkins and service accounts across all environments, enforcing least-privilege.
- Automated Kustomize-based deployments on EKS via Jenkins and GitHub Actions, including environment-specific blue-green overlays, health checks, and conditional restarts.
- Implemented EKS node scaling automation and workload autoscaling (HPA/VPA) to right-size capacity and reduce cost.
- Authored deploy-time SSM parameter creation and validation and managed Secrets Manager, S3, and KMS ARNs through modular CloudFormation for secure, reproducible configuration.
- Migrated service base images to Amazon ECR and automated EFS access-point provisioning and cleanup via GitHub Actions workflows.
- Introduced AI-assisted automation — MCP server integrations and custom GitHub Copilot / Claude agents — to accelerate IaC, pipeline, and runbook development.

DevOps Engineer, CI/CD & Cloud Infrastructure — Incedo Inc., Chennai

Aug 2021 – Sep 2025

- Built and maintained Jenkins CI/CD pipelines — including Gradle- and Maven-based build and dependency management — for build, test, and deployment across multiple microservices, and administered Linux servers and core AWS infrastructure (EC2, VPC, EKS, ECR).
- Migrated 15 microservices to Amazon EKS (120+ pods); standardized Helm chart packaging and Docker containerization, and introduced Flux for GitOps-driven continuous delivery.
- Migrated repositories from Jenkins to GitHub Actions with automated linting, unit tests, Docker builds, and staged rollouts — pipeline runtime ↓ 68%, release cadence 15–20 per week.
- Reduced cloud spend by ~40% via AWS Savings Plans, autoscaling, right-sizing, and S3 Intelligent-Tiering; cut container deployment time from ~45 min to under 10 min through standardized base images and layer caching.
- Established observability with New Relic, Elastic, and CloudWatch dashboards, alert policies, and on-call runbooks — user-facing incidents ↓ 30%, MTTR ↓ 45%.
- Enforced IAM least-privilege and mentored teammates on container best practices, Kubernetes resource tuning, and DevSecOps principles.

KEY PROJECTS & ACHIEVEMENTS

- Terraform EKS Platform (Personal Project):** Designed a Terraform-managed AWS platform — S3 remote state with native locking, VPC, EKS with IRSA and access entries, plan-on-PR CI via GitHub OIDC (no stored keys) with Trivy scanning, and Flux GitOps — built to be created and destroyed each session. github.com/siddharthtp10/terraform-eks-platform
- AI-Powered PR-Validation Bot (Hackathon Runner-Up → Production):** Designed and built an AI-driven pull-request validation bot that automatically reviews PRs — validating IaC, config, and YAML changes against team standards, flagging security and policy violations, and posting inline review feedback on every Bitbucket pull request through automated Jenkins pipeline gates. Placed runner-up and, at the judges' recommendation, implemented it into the team's engineering workflow — now used by ~150 developers, cutting manual review time by 15+ minutes per pull request and catching misconfigurations before merge.
- AI/ML Intelligent Document Processing (NIGO Detection):** Prototyped an AI/ML pipeline for Not-In-Good-Order detection on S3-sourced documents; evaluated deploying an in-house ML model as an EKS microservice to reduce third-party API cost and keep sensitive data in-VPC, and designed the supporting architecture.

EDUCATION

SRM University of Science & Technology, Chennai — B.Tech, Electrical, Electronics & Communications Engineering

Jul 2017 – Apr 2021

LICENSES & CERTIFICATIONS

- Certified Kubernetes Administrator (CKA) — Linux Foundation | Feb 2024 – Dec 2027
- AWS Certified Solutions Architect – Associate — Amazon Web Services
